

Cure Cancer with a Hair Dryer?

How-to fight off and repair from cancer & other diseases like MS, using a hyperbaric hair blow drier?
What need is there for increased Medicare if we easily solve cancer & expensive diseases?

What would make you the wealthiest person on Earth? Money or having great health? What if you could use a 20 dollar hair dryer to increase your **Immune System health to such a boxing ring level it would fight off** 1. most major disease organisms, 2. stop cancer dead in its tracks and 3. keep it there, and 4. repair the nerve disorder wreckage of some heart diseases and multiple sclerosis and stave off Alzheimer's Disease?

I am going to tell you the greatest secret of this 21st century => how to stop cancer and, should you have cancer, to hold it slowed down in "stasis" growing at a much-reduced snail speed. Acid-leaning bodies are cellular-level mitochondria corrupted, sugar energy-dependent, crippled cells that forgot how to process bodyfat for energy, turn cancerous and harbor illnesses and diseases. This document tells the basics to know & practice **self-hyperbarics: increased air pressure for germ-burning health.**

Necessary facts will get you a long ways:

1. No one wants you to know how to cure cancer with a hair dryer because 2007 link => **there's no money in it**. The world revolves around money so not only does my innovative new use of a common hairdryer not make much bucks it also sucks the dolares out of cancer centers and cancer treatment budgets => [hospital administrators and doctors losing their Mercedes](#).

2. Planet Earth is a symbiotic engine. Oxygen given off by plants, including much from plankton sea kelp, is supposed to be in balance with carbon dioxide breathed out by the animals and man. This balance is needed for overall systemic health and lung health. Recently scientists have noted sea plants expelling CO₂ instead of O₂, lowering available oxygen significantly even more. The human body is supposed to be an alkaline-leaning (O₂) disease-fighting juggernaut and yet we see sickness filling the Earth, a direct result of being off balance. **What caused this balance to sour?**

3. The O₂-CO₂ imbalances began in 1950 to now be a health-depleting crisis by increased burning of fossil fuels (crude oil, coal mostly). Our combustion engines (vehicles) plus oil-fired and coal-fired power plants also contributed. Most people think cancer has increased primarily from these pollutants but no, the lowered oxygen has been a big part => too low oxygen = low health.

4. So our own engines have **caused the planet to become a paradise => for plantlife**. They get all the carbon dioxide they can stand. That is why after 35+ years of accelerated rainforest destruction being plowed under and replaced by farming operations in Africa and South American countries, we of the North American US/Canada & other developed countries still have **enough atmospheric oxygen concentration** (psi as lb./inch squared).

5. The "grab" in all this is that just breathing "enough oxygen" falls short. Sure, we can live, but health and prosperity are removed from us. For those living in the inner cities where vehicle concentration is multiplied many times over -not some EPA average- longevity has been declining for decades in New York City from deadly "miasma". Might as well be airborne Behcet's.

6. That is not all. Laboratory-made (lifeless chemicals) prescription drugs and OTC (over-the-counter) that we combine willy nilly together, believing they are harmless but **that drain us of oxygen in an indirect way:** the human immune system recognizes them as not being from living matter and therefore "invaders" and attacks the drugs 24/7. This constant fighting inside our body is an O₂-burning & O₂-depleting acidity-raising cancer enabler filling your blood with cell wastes like leachate dripping out of a landfill into the ground water table for drinking. How many do **you** take?

7. However, many peoples and national groups can own a cheap handheld hair dryer! They can solve the low lung oxygen psi condition that is causing increased sickness and death from such as cancer, MS, Avian Flu **and many serious maladies of our time, to now be brought under their control.**

Heart disease? Yes. Obesity? Yes, although obesity is a complex issue calling for other measures in addition to increased oxygen-fired fat metabolism.

8. Hospitals, their doctors and the American Medical Association all know the health benefits **-and the vastly speeded up healing-** of the human body from placing patients in pressurized hyperbaric chambers filled with pure O₂. They know oxygen destroys anaerobic disease organisms (those organisms that hate oxygen i.e. cannot live in too much oxygen). But they also know that **any person breathing pure oxygen** will begin to be poisoned by it, so that's one other reason you do not know to use your hair blowdryer to fight diseases. How is that? I mean how [doctors have kept so busy figuring out what you cannot have instead of figuring ways you could.](#)

9. Hundreds even thousands of years ago before modern medicine, mankind enjoyed a higher level of health from an O₂-rich human-favoring atmosphere. So they also enjoyed "Golden Ages" when they figured out intricate disciplines of mathematics and invented all our simple machines, the inclined plane, the lever and the screw, without which you and I would still be carrying water buckets. Plus they laid down some serious equations making trinomial-solving computers possible ([from a higher % of oxygen](#)).

10. You have probably noticed an increasing number of nutrition products, drinks and powders claiming to raise people's oxygen level. They all come nicely packaged with a full television commercial entourage having the fake doctors (well paid Hollywood actors that sound really smart). So when you buy those products, which I do some of the better ones myself, the price is **possibly 1000% what it costs to produce.**

11. Later on we sometimes find out they came packaged in soft plastics that cause cancer. However, something you should also know is that during my extensive trials of these products I have discovered that some of them deliberately lower their ingredient ratio so we crave more cans and bottles of their health powders and pills. **Again the money.**

12. So why doesn't everybody buy a hospital-grade hyperbaric oxygen chamber? They cost many thousands of dollars; plus that obtaining pure oxygen is very difficult because it is a volatile flammable gas and quite explosive to risk falling into the wrong hands. That is why only hospitals and health treatment centers have them. Tanks of oxygen are highly regulated.

Here is the California el Nino hair blow dryer way:

13. Take a common portable handheld hairdryer, turn off the Heat to Blow Only and place an enclosure around yourself or just your head, and its higher-than-normal **air pressure will press more oxygen molecules** onto your red blood cells as they pass through lung alveoli. I suggest using the Low setting. The chosen enclosure should not be completely airtight and **air should escape, carrying expelled carbon dioxide with it.**

Such self-treatment methods I call Self-Hyperbarics and Home Chemo. The increased yet slight extra workload of some other methods below also build muscle tone and stamina of the rib muscles but anyone in **poor health must use them SPARINGLY AT FIRST.**

14. These other ways cost even less than hair-dryers: you can **a. exhale into a balloon**, causing a back pressure into the lungs that also increases lung pressure psi. Or you can **b. swim underwater**; the water above you pressing down presses the held oxygen into the alveoli, same effect. So you don't have a balloon and your pool membership expired?, **no problem!**

The best self-hyperbaric treatments in the world can be done two other ways => **c. Before ascending stairs** take a small to medium extra deep breath and hold it, see how many steps you step up before needing a fresh breath. Doing this just a few times per week will raise the body stamina and health of even the Aged Baby Boomer. **d.** So you are maybe very ill, or have a parent who is ill, what then? I have saved the best for last => Have the patient take a decent breath then **e. purse their lips together and blow out**, using the lips to hold the air back from being so easily expelled or **slightly restrict exhaling with one hand.**

Now you are an Expert on **Self-Hyperbarics for Power and Health** that has helped me on some of my darkest days to recover from oxygen-robbing illnesses and angina from wrong drugs. For you see, even though I lack a doctor's diagnosis, from all my accidents and injuries and nuketest-altered thyroid gland from conception I have reasons to believe I suffer from many undiagnosed medical issues including myasthenia gravis, multiple sclerosis, and have already fought off and held back both two cancers and twice a Lyme's Disease bacteria spirocheate infestation.

These methods work and they are all very much free from me to you, and from me from the God who has inspired me to be **able while ill** to figure answers to so many world health and Energy Famine-stopping answers => More? => [this link](#) and [this one](#) will put you on your way.

Godspeed friend.

Now for a few extra thoughts:

Hmm. Well, you got me. It's true! I am not a certified doctor. So will you take the leap of faith and try anyway? Who today can we trust? Anyone? How about doorknockers like me? Well then, do you want to trust the very people who have worked so hard since the invention of the hyperbaric chamber (60 years) to make it impossible for you to ever own one? **Conflict of interest? You bet'cha! \$ \$\$** Go ahead and ask your doctor because technically you should anyway, but their answer has to be No because my methods have not been approved by them nor their big-organization American Medical Association that is **keeping Americans dying from runaway and untreated obesity** carrying Union Health insurance bats and baseball cards, and none of my cancer cure and health ideas are allowed to be printed in their moldy yesterdays-knowledge medical manuals.

They can't do it! They would lose your money + community prestige.

Their manuals say I cannot live without taking a thyroid supplement also yet I quit taking them 2 years ago. **Their manuals say** I cannot be alive today because I quit taking their Lithium Carbonate in September 2002. I was rejecting both as they were [negative-O2 sicking me toward the grave](#). **Their manuals say** I cannot -and you can't either- defeat cancer with nutrition products, yet I and others have. It took 4 weeks that felt like 7. **Their manuals say** a patient cannot survive a nervous system assault by Lyme's Disease spirocheate coiled flagella-tailed bacteria but I have twice, the last time in late-2006~early-2007 crippled me til barely able to move my jaws to talk. So maybe you might want to **re-consider discounting ol' Woodrow Marshall Riley Jr, JW** from a long line of American inventors and doctors and give your God-designed and God-given stem cell building body a chance to strut and show its stuff like I did. You'll find out that:

You have been sold a Bill of Goods, my name-unknown friends, just like I was. You were told from childhood how weak you were be-floored to illnesses **so you became nutrient weak**, how sick you would be without their medical expertise babying you, so all their **dr. mommie antibiotics found you** (til they stopped killing muscle-devouring superbugs eh?). We accepted their satchels of expensive Magic Beans while we all to a man and woman are dying even faster from vile diseases like Behcet's Syndrome, infant death while asleep (SIDS) and even melanoma skin diseases from their college buddies across the hall, the 1960's-era chemists busily destroying Earth's ozone layer while they pulled federal paychecks doing it!

So now you know their **false Magic Bean dependence-on-them causes nutrient-poor infants born dead to low-oxygen Moms**. Imagine what your life would have been like had you known these secrets of the Ancients? What else are they keeping from you? [Zero Emissions Energy Solutions?](#) Stop accepting carte blanche magic health bean instruction manuals written 50+ years ago. Quit accepting the surface answers (crude oil too). Take your oxygen-improved body for a spin, thank God and live well past 100 years of age a rich man or woman.

Knock-Knock: [Revisit the Bible and live longer than that.](#)

For the more technically-minded:

So there's basically two ways to stop cancer (besides surgery) => the doctor-researcher way and the **DNA-knows-howto-already way** ~if~ the body is supplied the **#1** intense nutrition to power up the body's DNA to over-produce fresh replacement stem cells faster than the patient is dying while **#2** at the same time delivering a vitamin acid & antioxidant nutrient bath via the body's delivery system its blood, drowning the hungry~thirsty cancer cells that are sopping it up from the bloodstream like there's no tomorrow => killing themselves with an "internal acid burn death" (august 31 2007 => www.prleap.com/pr/91843).

I have proven the 2nd way works with a hair dryer because oxygen is a necessary nutrient of Life that pours gasoline into the immune system carburetor; **will they ever prove theirs?** No; they won't find their magic bullet and I can tell you why => I just told you: **the "magic bullet" is You** today just like when you were a fetus and then an infant growing at a fantastic rate of speed: **Life Healthy Restoring Speed.**

Each of us is born genetically different from every other person, which I know you already know, but scientists have admitted that as each person encounters a different set of disease organisms i.e. bacteria and viruses they many times result in changes inside our cells. So the older we get the more different we become... **so the cancers we develop are our own breed of cancer cells** born from our altered-by-disease + over time and unforeseen occurrence giving us our own **individualized cancer cells than anyone else that only your immune system can punch out.**

Your own individual cancer cells <> your own solution.

Cancer researchers will occasionally succeed for cancers that are caused from environmental poisoning not premature lifestyles-caused old age nutrient-poor apoptosis piling in, also to be a speeded up result of [thyroid dysfunction like so many today have](#) as I had, declared incorrectly and maliciously by doctors to be "rare" when it most certainly is not.

So the cancer researchers aren't going to be complete losers. They have their place and **we should all respect them for that.** But as for pouring trillions of taxpayer dollars down their pants so they can stand on a pedestal? No, that's too much bowing.

One day we may farm the air for food, depleting the bacteria and viruses to our great benefit ending world hunger 100%. Perhaps when we stop feeding them with dead bodies and spilled blood from wars ([Micah 4:2](#) and [4:3](#)). And the population overflow will be moving out into the cosmos using one of my anti-Gravity engines, [or even a combination of all three](#). There is, after all, a lot of universe out there waiting for Men of Peace who find something to do besides build more weapons and trashing the earth of its natural mantel-supporting resources oil/coal/gas that could so easily be left in the ground they belong as **my circular engines have made them obsolete:** [AskInventor](#) <> especially this page => askinventor.com/pdflistfor2008.htm

The preceding five pages were written on October 20, 2008. Today is Dec. 12 2008 and this morning I realized I perhaps had not quite completely convinced you as to just how self-hyperbarics **has to work | cannot help but work**, a case I came close to finalizing but not quite yet. So here goes: the mouth and tongue and mouth linings have **fluid-absorbing pores**. Air is a fluid too so [mouth absorption of air and liquid nutrition both has to work](#) just as it works for a tree and plants (see the picture last link above)! Liquid nutrition that comes in, if swished around in the mouth before swallowing will in fact be absorbed much more quickly into the bloodstream (and next to the brain). [Oxygen-containing air passes into the flesh much easier than liquid](#). The reason this has to happen is the molecule size of nutrients being smaller than the pore diameter. Good health is a math problem with a math solution => small nutrients + large pores equals +absorption of oxygen+. But what others were unable to see had to come from me because of my working up the air-powered ([wind-powered](#)) engines... so the insight into self-hyperbarics was a direct result of engine work no one in the health fields had occasion to deal with as I had.

Lightbulb moment

[Air & O2 molecules are a smaller fluid than nutrition molecules.](#)

So that when a bedridden sick person purses their lips together creating a slight back pressure inside their mouth what happens is they are pressing **more O2 into their bloodstream**. You see, this is not strictly an increasing of lung pressure like say holding a breath and walking up stairs is; it is [primarily in my view an increasing of air-in-the-mouth pressure](#). It is likely closest a person can get to giving themselves a hypodermic injection of health. So Alzheimer's and other maladies of the mind benefit from the extra oxygen coming in via mouth and tongue absorption... which was what brought me out of bipolar, getting more oxygen, except that at that time I was mostly getting it from nutrition alone (such as Ginkgo Biloba that causes brain capillaries to dilate & expand, allowing more oxygen molecules to reach the deeper and older [stubborn] areas of the brain).

Some people mistakenly think that self-hyperbarics might cause too much nitrogen in the breathed air to enter their body. Well maybe, [if you way much overdid the mouth absorption method](#). Sick people in a hospital bed are very unlikely to do it more than enough to aid their health and increase heart and muscle strength. I suffered from heart failure (meds~oxygen displacement from 1991-2002). I did it and prospered; you can too.

But as for the walking up stairs and swimming methods where the extra absorption comes from increasing the air pressure in the lungs that is not the same because if it was true, we would see dead Olympic swimmers and contestants carried off on stretchers every Olympics! Lightbulb moment Number 2 then is that the blood going through the lung alveoli are only engineered to pick up oxygen by dissolving it onto the blood platelets. **THAT is why swimming does not kill the swimmers and will not kill us**, a miracle of Creation science to pick up O2 molecules not the nitrogen ones: [@likethedaysofatreewillthedaysofmypeoplebebiblebookisaiahchapter65vs22.jpg](#)
