

**The Day the Earth Stood Still Really Happened,
John Cleese really asked for mercy,
and mercy was given on
12-21-2008**

John Cleese asked Klatu (played very well by actor Keanu Reeves) for mercy based on an idea that when a sentient species such as Mankind arrives at a "precipice moment" where the scales of justice finds a species deserving to die, it should be allowed to survive a bit longer. Like all movies this is all an illusion; John Cleese is an actor saying lines written by a writer, so when Actor Cleese said his lines I knew it was more people than just him asking for my help.

John Cleese begging for an extended "precipice moment" so we can get our act together & do better is reminiscent of how a drug addict or alcoholic will plead for just one more shot. And we all know that when such person gets that one more shot they invariably come back again & again for more shots. What Cleese likely does not know is that out here there is somebody who has been giving those shots repeatedly to this world already since 1989 and we still come down to **December 2008 on a precipice leaning over the cliff?** I have been blessed to be that somebody. In 1989 I came to understand how half of America's energy needs could be easily met by getting electricity from lightning. Having that system functioning would have stopped the rush towards the precipice like a herd of demonized squealing pigs but the D.O.E. (U.S. Department of Energy) turned down the submission papers. Does John Cleese know that? **Why would he? He's an actor.**

In November 2000 between my 2nd heart seizure and 3rd of that year coming later in December I suddenly understood a new type of windmill that did not spin; instead it went back & forth (reciprocating). I attained legal protections for it from a company called The Egg Factory long before releasing it on March 10 2003 upon which time another inventor saw it and adapted it to spin a full 360 circle instead of reciprocating. With it he made 4 major inventions work.

So why are we on an energy precipice facing a manure haul's worth of pollution in the oceans for? His one invention was a military cargo plane that flies through the atmosphere (like a porpoise glides thru water) by expanding then compressing a load of helium gas. Meantime, while those cargo planes began rolling off the assembly line about a year ago mankind continued pressing closer to the environmental precipice that sparked a remake of the 1951 movie made the year I was born: **The Day the Earth Stood Still**, with actor John Cleese more or less reaching out to me for even more help whether he knows of me or not any more than that inventor paid me.

At the top of this page > [pdf list for 2008](#) and preceded by a lot more than that on [sitemap.htm](#) I have been releasing one new engine system ([fat sculpting 1996](#)) after another yet the **Earth Has In Fact Chosen to Stand Still**. I saw shades of my circular energy inventions & ideas incorporated in the movie and **I am honored**. The references to Noah, globes swirling with energy of an unknown production. So I decided to review several of my older documents and yep, I had used the word "precipice"; it is on my 666 Satan Number page. Someone knew of me and hoped I would come across. **I did. Next page.**

We saw the movie on the 17th of December so I had time to kick it around some if I wanted to but I didn't. It was a simple straightforward movie. But then on 12/21/08 a question was posed on SlashDot about how if anyone had an idea for getting power beamed to Earth from Outer Space President Obama was wanting to know. I not only explained how to get it but designed the **skeleton plan for arrangements on Earth to receive it**. It does not take a "Manhattan Project" & "think tank" of sweating scientists to solve Earth's energy crisis; **it has only taken one man**, Klatu in the movie or a CloudSeeder out here releasing refreshing Spring rains all over this planet since 1989: pdflistfor2008.htm.

The Stardust Energy System:

#2: [http://science slashdot.org/comments.pl?sid=1069437& \(truncated to fit\) =26190869](http://science slashdot.org/comments.pl?sid=1069437&(truncated to fit) =26190869)

Replies are saved as [picture one](#) and [picture two](#). Bringing ideas to completion does require much grunt work, but not the ideas themselves; it never has.

A Metallic Antennae Mesh Screen Moon Coating does intense solar collecting over to a Moon laser that beams it to Earth where a 2700 mile long wall waits like the Big Wall of China. Plus a few other features I added: a long solar collector atop an elevated collector wall stretching from Upper New York across past Chicago Illinois over into Arnold Schwarzenegger's downtown Sacramento California Governor's office... so the Moon laser has a long target easier to nail with a wide-angle lower intensity X-Men Moonbeam. Power can be branched off the new Power Grid Backbone to Massachusetts across the Midwest Plains to supply the Brand New Power Grid President Barack Hussein Obama plans to build. And I'd like to see some new pyramids too, did I mention that? **I'm getting sick and tired of Egypt having all the Pyramid Bragging Rights**. And underneath that solar collector wall I'd like to see a 2700 mile long Mag-Lev Disney Zephyr train hanging underneath that does a **MINIMUM OF 555 MILES PER HOUR**.

Summary of what I want =>

#1: solar collector 2700 miles long

#2: on top of elevated Solar Collector Wall

#3: Branched Power Grid off the Collector System

#4: Mag-Lev Coast-to-Coast Bullet Train

#5: that travels 555 Miles Per Hour

#6: all of it completely above present interstate/local traffic.

#7 an don't forget the new pyramids #8 powered by directed beams also.

So there's the design for the whole system that took about an hour to write and a lot less time to solve this past Sunday, yesterday. But with all the other new energy sources I have presented since 1989, 2000, 2003, 2005 and many others not yet presented since 2005, here we are y'all, watching movies about how we are still perched on a very narrow limb waiting for a chicken hawk. [For not by his own power does a man become mighty => 1 Samuel 2 verse 9](#).

Woodrow Riley, 12-22-2008, feeling many thanks to the cast of the movie: Keanu Reeves, John Cleese and Jennifer Connelly and the fine young man.
